

3.6.4. Linework

New work (object lines) and text shall be of the same lineweight, approximately 0.013 inches. Dimension, hidden, center, background and phantom lines shall be approximately one-half the width of object lines. These lines may be tinted with a dark gray shade. These fundamental guidelines may be deviated from, but must be defined by the individual drafters in a consistent manner. Should the first drawing submittal prove to show an obvious degree of inconsistency, illegibility and/or disorganization, the drawings will be rejected and more stringent guidelines will be imposed.
