

3.6.3. Lineweights

Lineweights shall be controlled via the layer manager and dimension style manager only. Polylines shall only be used to control lineweights in the Airport-provided title block sheets. All lineweights for color table (.ctb) files shall use object lineweight. The consultant shall utilize the following Airport Color Table files:

- BlackGray.ctb: Plots all colors black through 255, except colors 8, 9 and 250, which plot in their own gray shade of color and color 156, which uses object color for plotting the SFO logo.
- BlackGray10Colors.ctb: Plots similar to the BlackGray.ctb, except each color that ends with the character 0 (zero) plots in their own color, beginning with the number 10. For example, color 10 plots in color 10, color 20 in color 20, color 30 in color 30...color 240 in color 240.
