

### 3.6.2. Linetypes

The Airport accepts both AutoCAD default and custom linetypes. SFO.lin is available for download. The use of AutoCAD default linetypes shall be in accordance with industry standards. These generally include center, continuous, dashed, hidden and phantom linetypes.

Currently, the list of acceptable linetypes includes utilities and fence lines, which are shown in Figure 6, below. The naming convention is "SFO" and a description, followed by a single digit number and specific alpha characters. The single digit number indicates the relative spacing between the annotated characters. As the number increases, the spacing between annotated characters increases. Refer to the template files for the complete list of linetypes. Examples of alpha characters include "A" and "AB" for Abandoned, "F" and "FM" for Force Main, "DB" for Duct Bank, and "IW" for Industrial Waste.
