

#### 5.5.7. Review Status

The review status is indicative of the stage of the drawing/design. It is used to differentiate various iterations of the drawing so that the person using the drawing knows which stage of the design process the project is in. Some examples are "DESIGN DEVELOPMENT," "30% REVIEW," "65% REVIEW," "FINAL REVIEW," and "AS-BUILT." The Airport PM will provide direction to the consultant about the composition of the review status indicator in each case for submittal.
