

2.2.1.1 Feature

A Feature is a representation of a real-world object on a map. GIS features have “spatial” information such as location, length, area, elevation, etc. A GIS feature at SFO could be any number of things such as:

- A polygon to represent the runway
- A polygon to represent the NAVAID critical area
- A polygon to represent a leasehold or easement area
- A polyline to represent a paint marking for a non-movement area line
- A polyline to represent the airport property acquired and added to the airport property
- A polyline to represent an underground utility line
- A point to represent a utility valve feature
- A point to represent an airfield light
