

3.4 FME Scripts

The FME scripts are the brains of the ETL process. These scripts automate the process to extract, transfer, validate, clean, and load the interior floorplan data into the AVM and PROD Geodatabases mentioned before. The scripts check and clean topology along with automatically populating attributes for features from the CAD files. These FME scripts are located in the following file path:

<Enter SFO internal path>

All the scripts have sections that describe what the script is doing
