6.1 Cover Sheet

The cover sheet (see Figure 16) fills the drawing area of the title block, and should be exploded and manipulated as necessary to accommodate the particular contract. The section that contains the title information should remain intact, except for appropriate changes to the contract number and contract title. The lower sections shall be modified to suit the particular contract, which may include adding more sheets, as necessary. Specific layers shall be used for the cover sheet, as indicated in Appendix D.

The "2L" and "3L" files contain attributes (see Figure 17, which have the title block information, such as sheet title, drawn by, designed by, check by, date, sheet number, etc. These attribute files differ from each other in the number of lines for sheet title. Sheets that have 2 lines in the title should have a "2L" file name used, whereas sheets that have 3 lines (or one, leaving lines 1 and 3 blank) in the title should use a "3L" file name. The reason for the variation is it allows the sheet title to be centered within the space allotted within the title block for a more professional appearance. The field(s) in the attribute dialog box prompting "ARCHITECT or ENGINEER" shall be filled in the same with either "ARCHITECT" or "ENGINEER". The choice is determined by the discipline of the individual whose professional seal is to be placed on the drawing.
