5.5.10. Revisions

Throughout design development and up to the original version, the drawing shall be indicated as Revision – (dash). These iterations are differentiated by the Review Status, as described above. When the drawing is initially submitted as complete, it shall be Revision 0.

If the need for drawing revision arises, such as in the case of addendums, two areas of the drawing shall be changed: the drawing area and the title block. Revisions shall be sequentially numbered (i.e., 1, 2, 3, etc.).

All revised drafting work in the drawing area shall be enclosed by cloud, and each cloud shall have a revision triangle, including the pertinent number, as its callout (see Figure 14). The cloud shall be appropriately dark and bold so that the contractor can clearly see what is different from the previous submittal. The title block shall be changed in two places: the revision number (see Figure 13), and the revision column (see Figure 12). The revision column shall also include the revision triangle, as an exact match to the triangle in the drawing area (see Figure 14).
