1.4   Organization of this Document

This document defines the requirements for developing and maintaining Airport DWGs, from their most fundamental components to complete deliverable packages. The graphical objects that depict real world features, as well as alphanumeric and graphical information about these features, are defined first. The organization of these objects onto layers within a drawing is covered next. The combination of these elements with a standard title block establishes sheets, which are then combined into drawing sets. Finally, the document discusses the delivery of these drawing sets to the Airport. A glossary of acronyms and commonly used terms is provided as a resource. Electronic resources that the Airport has provided to help consultants and staff members comply with this Standard are also noted, where relevant, throughout the document.

These requirements assume that readers have a basic understanding of CAD concepts and terminology. Readers who are new to the Airport's CAD requirements may wish to review the document in its entirety. Those who are familiar with the requirements may wish to use the document as a reminder of the specifics to which they must adhere.
