## 2.3 Software

SFO GIS currently utilizes a variety of GIS and CAD based products from industry standard software companies Esri and Autodesk. Esri's ArcGIS Enterprise Suite is primarily used for all desktop, server, online, and mobile applications and components. Latitude Geographics' Geocortex is also being used for more complex GIS online development. Autodesk's AutoCAD Map 3D is being used for receiving design and as-built construction drawings, which are converted to GIS. Open Spatial's Munsys is used with AutoCAD based products for all utilities updating and maintenance within Oracle.
