4 Data Quality Control and Acceptance

All data entered into the SFO GIS database will be subjected to a comprehensive quality control process described below to ensure it is compliant with this Standard.

The Data Provider will perform an electronic, pre-submission quality control check of each spatial data deliverable. A quality control (QC) checklist/report documenting the results of the data Provider's QC process shall be created for each deliverable and submitted to SFO upon request.

The GIS data quality assurance (QA) requirements are detailed in the following sections.
