1.1   Objective of this Document

This Computer-Aided Drafting (CAD) Standard document defines the requirements for creating, maintaining and submitting CAD drawings to San Francisco International Airport ("Airport" or "SFO"). It establishes requirements for the contents of AutoCAD® Drawings (DWGs), including use of paper and model space, handling of externally referenced files, layers to be used, symbology and plotting requirements. It also explains how to correctly organize drawing sheets into drawing sets, as well as how to submit completed drawing sets to the Airport. The content of this manual supersedes all previously published Airport CAD Standard versions and is subject to change without notice. The Airport shall not be liable for errors and omissions in this Standard.
